

Description:

Crona Thin Bed Eco is a Lightweight Block Adhesive (ALC Block) product made from cement, silica sand, selected additive materials, and containing chosen polymers. Crona Thin Bed Eco product is designed for the installation of lightweight blocks with good adhesion, strength, and vibration resistance.

Advantages:

- High adhesive strength with a 3 mm thickness application.
- Faster working time, saving time and costs.
- Economical in material usage, only requires the addition of clean water.
- Results in a neater, more even, and stronger installation.

Coverage Rate:

- For installing 10 cm size lightweight blocks, 1 bag @ 40 kg can be used for an area of approximately 10 m².
- For installing 7.5 cm size lightweight blocks, 1 bag @ 40 kg can be used for an area of approximately 16 m².

Storage & Shelf Life:

Crona Thin Bed Eco product can be stored for more than 6 months in a dry, well-ventilated place, provided the packaging remains unopened or undamaged.

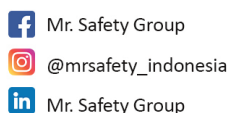

How-To Application:

- The surface of the lightweight block must be dry, solid, and free from dust or loose particles. It is recommended to wet the lightweight blocks before installation with water. To facilitate the application, it is advisable to use a notched trowel with a size of 6x6 mm.
- Mix 1 liter of clean water with 4 kg of Crona Thin Bed Eco (10 liters of water for 1 bag of 40 kg). Stir slowly until it becomes even and there are no lumps in the mixture. Let the mixture rest for about 10 minutes, and then it is ready for application.
- Spread the prepared Crona Thin Bed Eco adhesive onto the surface of the lightweight block using a cement spoon or 6x6 mm notched trowel. Then, place the lightweight blocks one by one while pressing them, and clean any excess adhesive from the block joints. It is recommended to install the lightweight blocks with a thickness between 2-3 mm.
